PROFESSIONAL EXPERIENCE

santhalstrikers.in

MAY 2026 – PRESENT

Lead Full-Stack Developer & DevOps

Ghaziabad, UP (Remote)

- **Single-handedly engineered** and deployed the official sports league website, designing the full product architecture from scratch.
- Built a secure **backend API infrastructure with Node.js and Express.js, implementing custom database schemas and controllers with MongoDB and Mongoose**, paired with a responsive **React** user interface.
- Integrated live scores APIs and coordinated with streaming providers to deliver real-time broadcast streams with minimal latency; managed **domain mapping, server hosting, and database reliability for the tournament active during June 10 – 28, 2026.**

EDUCATION

G.L. Bajaj Institute of Technology and Management

2025 – 2029 (Expected)

Bachelor of Technology - Computer Science and Engineering

Greater Noida, UP

- Affiliated to **Dr. A.P.J. Abdul Kalam Technical University (AKTU)**, Uttar Pradesh.
- Relevant coursework: Data Structures, Algorithms, Object-Oriented Programming (C++), Databases, Software Engineering.

TECHNICAL SKILLS

Programming/Scripting Languages: Python, JavaScript, TypeScript, C++, HTML/CSS, SQL

Frameworks/Libraries & Stacks: MERN Stack (MongoDB, Express.js, React.js, Node.js), Axios, LangChain

Databases & Caching: MongoDB, Mongoose, MongoDB Atlas, PostgreSQL, SQLite, Redis

Developer Tools/Technologies: Git, GitHub, Docker, Postman, Vercel, Render, n8n, REST APIs, Webhooks

CS Fundamentals: Data Structures & Algorithms, Object-Oriented Programming, DBMS

PROJECTS

AI WEBSCRAPER - Link

MARCH 2026

Technologies Used- Python, OpenAI API, BeautifulSoup, Selenium

- Designed and built an intelligent web scraper that extracts raw HTML data and uses LLMs to parse and structure dynamic content.
- Handled dynamic pagination and bypassed anti-scraping protections using Selenium and custom user agents.
- Deployed as a reusable API returning clean JSON data, reducing data extraction time by **75%** for automation workflows.

DISCORD AI BOT - Link

JANUARY 2026

Technologies Used- Python, discord.py, LangChain, SQLite

- Developed a conversational Discord bot using LangChain to query custom knowledge bases with Retrieval-Augmented Generation (RAG).
- Implemented an automated moderation system using OpenAI's moderation API to flag and filter toxic behavior in real-time.
- Optimized system response time to under 1.5 seconds by utilizing SQLite database for local caching of context.

AUTOMATION DASHBOARD - Link

NOVEMBER 2025

Technologies Used- React, Node.js, Express, n8n, Axios

- Engineered a full-stack dashboard to monitor and trigger automated workflows across Slack, email, and CRMs.
- Connected n8n webhooks with custom Express.js backend endpoints using Axios for reliable state synchronization.
- Built a clean, real-time React UI to visualize active automation jobs, logs, and system health status.

ACHIEVEMENTS

- **LeetCode:** Solved 100+ problems, maintaining a consistent coding habit and a strong foundation in problem-solving.
- **Independent Project Delivery:** Successfully engineered, deployed, and maintained the end-to-end tech stack for a live tournament sports website with active streaming coordination.
- **Technical Competitions:** Built and shipped multiple full-stack applications in freshman year, developing strong fundamentals in React and backend API architecture.
- **Collaboration & Production Standards:** Fluent in working within developer teams and deploying to industry-standard production environments using MongoDB Atlas, Vercel, Render, and other professional developer tools.
